

Omama Jalal Sulaiman

Summary

Motivated third-year Computer Science student specializing in Software Industry and Multimedia (SIM) at Alexandria University. Strong foundation in data structures, OOP in Java, data science with Python, and game development using C. Hands-on experience through real-world projects and internships in data analytics and machine learning. Highly collaborative, fast learner, and eager to apply technical skills to impactful real-world problems.

Education

2023–2027 **B.Sc. Software Industry & Multimedia (SIM)**, Faculty of Science, Alexandria University, Alexandria, Egypt
Grade: Excellent, GPA: 3.88

Technical Skills

Programming	Python, Java, SQL, JavaScript, C#
Data & ML	Machine Learning, Deep Learning, NLP, Computer Vision
Tools	Power BI, Azure, MLflow
Concepts	OOP, Data Structures
Development	Web Development, Game Development

Soft Skills

Leadership, Teamwork, Time Management, Communication Skills

Languages

Arabic (Native), English (Fluent), French (Basics)

Experience

- Nov 2025 - Present **AI Data Science Intern – Microsoft Machine Learning Track**, DEPI
- Gaining hands-on experience in Python, data preprocessing, and data visualization
 - Applying machine learning and deep learning techniques on real-world datasets
 - Working on Natural Language Processing (NLP) and Computer Vision tasks
 - Using Azure for cloud-based machine learning workflows and MLflow for experiment tracking and model management
- 2025 **Data Analytics Intern**, Elevvo
- Completed multiple data analytics and visualization tasks using Power BI and Python.
 - Developed an interactive Retail Sales Dashboard analyzing total sales, profit, and year-over-year growth using DAX formulas.
 - Performed data cleaning and modeling on datasets of 10k+ transactions, enabling faster insight extraction.
 - Developed dashboards and insights from real-world datasets to support business decision-making.

Projects

- 2026 **Movie Recommendation System** [GitHub], *Python*
- Built a content-based filtering model using TF-IDF and cosine similarity.
 - Processed and cleaned a dataset of 5,000+ movies for training and evaluation.
 - Delivers personalized movie recommendations based on user preferences.
- 2026 **Egyptian Currency Classification** [GitHub], *Python · CNN · TensorFlow*
- Trained a Convolutional Neural Network to classify Egyptian banknotes by denomination.
 - Applied image preprocessing and data augmentation to improve model robustness.
 - Achieved high accuracy across multiple currency classes.
- 2025 **Power BI Sales Dashboard** [GitHub], *Power BI*
- Built an interactive Power BI dashboard for retail data visualization and trend analysis.
 - Implemented year-over-year KPIs for sales and profit using DAX formulas.
 - Enhanced insights with custom visuals, data modeling, and user interactivity.
- 2025 **Customer Segmentation using RFM Analysis** [GitHub], *Python*
- Performed data cleaning and preprocessing on the Online Retail dataset.
 - Applied RFM analysis to segment customers into 5 groups.
 - Created visualizations to identify key customer patterns.
 - Suggested marketing strategies tailored to each customer segment.
- 2025 **E-commerce Database (SQL)**
- Designed an Entity Relationship Diagram (ERD) and relational schema for Users, Payments, Items, and Orders.
 - Developed the database using SQL with appropriate data types and constraints.
 - Implemented queries and subqueries to manage and retrieve data effectively.
- 2024 **Nermo's Adventure (Unity & C#)**
- Designed and developed a 2D educational game aimed at teaching children the basics of Java programming.
 - Integrated interactive levels and visual challenges that introduce programming basics and conditionals.
- 2025 **E-commerce Website Frontend (HTML/CSS/JS)**
- Built a responsive and interactive frontend for an e-commerce website using HTML, CSS, and JavaScript.
 - Designed product listings, a shopping cart with local storage support, and a checkout interface.
 - Implemented dynamic DOM manipulation to enhance functionality and usability.
